PROGRAMMING INSTRUCTIONS FOR REGENCY 250

1) Make sure that jumper JU401 has not been cut.

2) Turn the unit on.

3) Press   Pro. Prior.

4) Press   0-all reference to 0 corresponds to 10 on the
              key board.

5) Press   The six digits of the receive frequency (this is
              also the transmit frequency if this is a simplex
              frequency; i.e. 151.625 or 154.000).

6) Press   0 for simplex
              8 for half duplex

7) Press   4 for Tx disable
              2 for CTCSS encode only
                      or
              0 for normal transmit and receive operation

8) The next digits determine CTCSS frequency. For no CTCSS
    press 00.

01	67.0	02	71.9	03	74.4	04	77.0	05	79.7
06	82.5	07	85.4	08	88.5	09	91.5	10	94.8
11	97.4	12	100.0	13	103.5	14	107.2	15	110.9
16	114.8	17	118.8	18	123.0	19	127.3	20	131.8
21	136.5	22	141.3	23	146.2	24	151.4	25	156.7
26	162.2	27	167.9	28	173.8	29	179.9	30	186.2
31	192.8	32	203.5	33	210.7	34	218.1	35	225.7
36	233.6	37	241.8						

9) If simplex was chosen, go to step 10. If half duplex was
    chosen, enter the six digit number of the transmit frequency.

10) Press   Enter, then the channel number the frequency is
                to be stored in.

11) Press   Manual, then the digit of the channel to review
                the channel.

12) For entering another channel, go back to step 5. If no
     other channels are to be programmed, turn the unit off,
     then on. The unit will now be ready for normal operation.

NOTE: REMOVE JUMPER JU401 AFTER PROGRAMMING.
